

Technical Bulletin #8

PANEL FASTENERS - SALTWATER ENVIRONMENTS

Date Issued: May 22, 2018

Roof Installations Within One (1) Mile of a Body of Saltwater

When the project site is located within one (1) mile of a body of saltwater, all exposed fasteners used to install Boral Steel™ stone coated roof panels and accessories shall be stainless steel. Boral Steel recommends using one of the panel and accessory fasteners as listed below in these environments:

- #10 X 2" long ¼" HWH 410 Stainless Steel T-17 Wood Screws
- #10 X 2-1/2" long ¼" HWH 410 Stainless Steel T-17 Wood Screws

These fasteners meet our specification for this environment: 2,000 Hr minimum Salt Spray - ASTM B117. These fasteners are recognizable by their coating on the threaded shaft of the screw. The heads are color matched to the panel color.

We reserve the right to amend or update these documents at any time.
